

Biorizon

The way to aromatics

Join the transition towards biobased aromatics

▶ TNO, VITO and the Green Chemistry Campus launched Biorizon, *The Way to Aromatics*. This Shared Research Center is anticipating the expected growing shortage of aromatics from the petrochemical industry and the widely shared ambition to green the chemical industry.

Biorizon focuses on the technology development for the production of

biobased aromatics for performance materials, chemicals & coatings.

With its ambition to become one of the world's top centers within five years, Biorizon attracts global leaders as well as SME's in the fields of feedstock, conversion, equipment and end products to join its industry driven Shared Research Center.
