

The way to aromatics

The Profitable Way to Biobased Aromatics

- ▶ Do you want to contribute to a better world whilst staying ahead of the competition? Join our transition toward functionalized bio-aromatics.

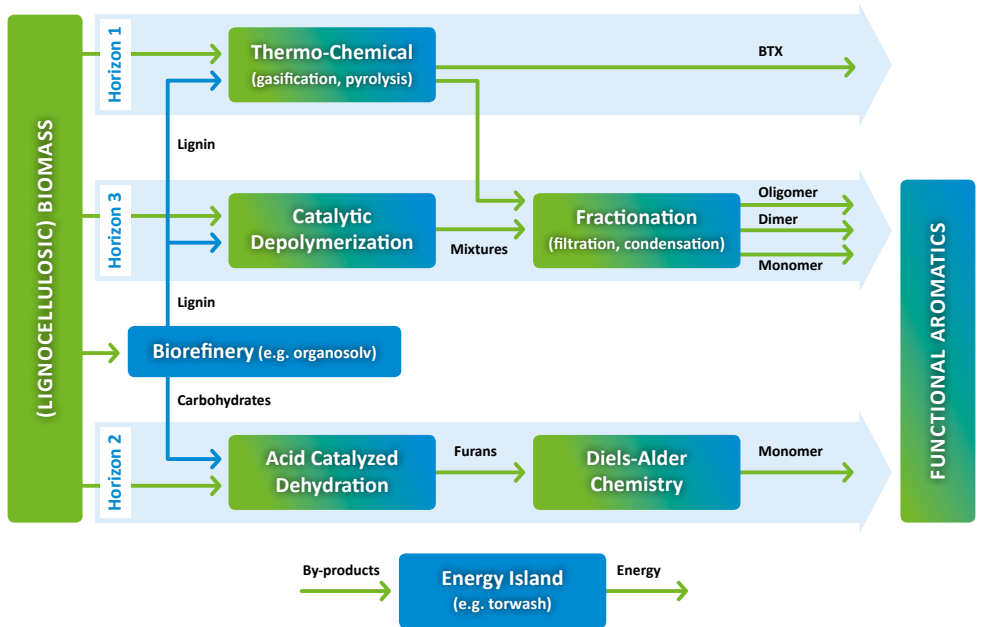

Shared Research Center Biorizon, powered by TNO, VITO, ECN and Green Chemistry Campus, works with partners to develop technologies to produce aromatics from biomass. This reduces dependence on petroleum, results in less CO₂ emission and offers profitable prospects.

Biorizon includes global leaders in the fields of feedstock, conversion, equipment and end-products as participants, as well as SME companies.

Our aim is to make commercial production of bio-aromatics feasible for industrial partners by 2025.
